

Mule 4010 Flip Up windshield P/N 10498

Includes:

1. (1) Top Windshield
2. (1) Bottom Windshield
3. (8) Quick Connect Clamps p/n 9881
4. (1) Plastic Hinge
5. (1) Velcro 11-3/4" Long (hook & loop)

Installation:

1. Peel back the protective coating so that the hinge can be installed as shown. This hinge is very hard to get on but will stay on well once it is installed. You will probably need a rubber mallet, soapy water and a buddy for this task.
2. Remove all the 1/4-20 nylon nuts from the quick connect clamps and set aside for now. Using the thumb screws attach the clamps and windshield to your rail cage. The thumbscrews will hold the clamps and windshield together. Once you are sure you have the correct location you can install the nylon nuts. Be very careful not to over tighten them and break the studs.
3. Now, you can peel back one side of the Velcro only and attach it the windshield. When you are sure it is in the correct location flip up the bottom windshield and remove the other backing on the Velcro. Flip it down and stick it to your hood.

Note: The windshield should be removed when transporting your Mule at speeds over 25 MPH. Serious injury could result if the windshield were to come loose during transport.
