Installation:

1. Remove the rear tail light assembly by removing (6) torx head bolts and (2) Phillips screws one on each end.
2. Remove the rear sub-frame and save the bolts. You will use the bolts.
3. Attach the rear bracket with the stock sub-frame bolts. Attach the triangle shaped part to the rear frame with the (4) 3/8 Flange bolts, washer, and nuts. Do not tighten yet.
4. Re-Install your plastic tail light assembly. See video for help.
5. Mount your bumper to the bumper to the brackets using the Black 3/8 carriage bolts, washers and nuts. Now, you can tighten all the bolts using a 9/16" Wrench or Socket. You will use (2) bolts on the underside, (4) on the back side, and (2) on top if you are not mounting a winch at this time. If you are installing a winch, your winch bolts will go on the top side.
6. The last thing you have to do is attach the side support angles. You will have a left and right angle bracket. Bolt the rear of the angles to each end of the bumper using the remaining carriage bolts.
7. You will have to mark your frame to drill a 1/4" holes for the support brackets. Once, you have marked your frame remove the support brackets and drill your holes. One per side.
8. Re-Install your side support angles using the 1/4-20 x 1-1/2" long bolts, nuts and washers on the inner ends.

Warning/Caution: The bumper is rated for up to a 3500 lb winch. Serious injury or death could result if a larger winch is used.
